Section 5: Recommendations of Use: Human Capital and Industry

Corporate and defense companies are constantly searching for innovative, resource management tools to assess and to track human capability development. Such tools are not only responsible for sustaining a work-related eco-system that encourages top-of-the-line leadership, increased revenue, and success but also for developing a resilient educational base, preparing for local/global markets, and channeling lifelong career opportunities for employees. In essence, these companies want either to find globally competitive individuals or to groom their employees into them. This is where EvalzNow becomes handy.

EvalzNow, which is a one-stop shop for HR / L&D performance monitoring, combines quantitative analysis with qualitative observations to determine the asset value of an employee against a SMART (specific, measurable, achievable, relevant/realistic, and time-bound) goal. The combination of quantitative analysis (objective) and qualitative observations (subjective) helps EvalzNow users circumvent the lopsided appraisals of traditional systems that are plagued with bias, leniency, inconsistency, and personal likeability (friendship factors). Many companies, for instance, have complained that traditional employee evaluation platforms gave well-liked employees, whom wasted a lot of company time, higher achievements than less-known/troublesome employees whom performed exceptionally well for the company.

The lopsided appraisals can be mitigated using a 3-point scale or a 5-point scale against SMART goals, absorbing quantitative measures and qualitative measures. (See below)

3-Point Scale (1st Preferred Scale)

- 0 Points: The employee has failed to meet the SMART goal even with support from staff.
- 1 Point: The employee has exercised poor judgment despite meeting the SMART goal.
- 2 Points: The employee has demonstrated the ability to meet the SMART goal with minor mistakes.
- 3 Points: The employee has categorically met the SMART goal.

5-Point Scale (2nd Preferred Scale)

- 0 Points: The employee has exhibited logical deficiencies or incompetence in attempting the SMART goal.
- 1 Point: The employee has failed to meet the SMART goal even with reasonable staff support.
- 2 Points: The employee has exercised poor judgment despite meeting the SMART goal.
- 3 Points: The employee has met the SMART goal without unnecessary micro-management or staff support.
- 4 Points: The employee has demonstrated the ability to meet the SMART goal with minor mistakes.
- 5 Points: The employee has categorically met the SMART goal.

The scales above can be redefined depending on the company type or the company structure; however, the intent of the 3-point scale and the 5-point scale is to determine the asset value of an employee with few gray areas. The corporate entity or the defense entity should use these small point scales in an internal SMART rubric across all work cycles. Moreover, the internal SMART rubric must separate quantitative measures from qualitative measures.

*In EvalzNow, the user can select between a 3-point scoring system and a 5-point scoring system; however, the scoring system cannot be changed/modified for the same unit later.

Quantitative Measures

Quantitative measures refer to objective measures such as theoretical knowledge and practical knowledge, as defined again below. Although the user can perform assessments at the employee level and the company level in EvalzNow, the user should wait until there is enough sampling data to compare one employee to another employee. Additionally, the user should bear in mind that the workflows assigned to employees differ in project size, resource allocation, complexity, data availability, deadlines, urgency, importance, overflow vs. downtime, and budget when interpreting data analytics. The common industry model is Theory & Practice.

Theoretical knowledge, by definition, refers to knowledge accumulated from studies or explanations based on presumptive ideas and abstract principles about a particular subject.

Practical knowledge, by definition, refers to knowledge accumulated from real-life applications, witnessed events/situations, and hands-on experience.

For corporate entities and defense entities searching for SMART rubric guidance about quantitative measures, please consider the items below.

Common Practical Knowledge Metrics

- Supports analysis through testing
- Tracks observations and omissions
- Notes empirical/process limitations
- Separates conjecture from proof
- Collaborates on decision-making
- Evaluates risk and feasibility
- Determines the scope of solutions
- Notes sources of error (root cause)
- Discusses planning & implementation
- Substantiates data interpretations
- Thinks outside the box (creativity and innovation)
- Deduces conclusions from findings and sampling
- Utilizes surveys, calculations, and statistics
- Succeeds in On-The-Job Training
- Develops strategies in the absence of information
- Exercises sound judgment to propose recommendations
- Accomplishes project goals before deadlines
- Adapts to new technological tools quickly
- Iterates processes based on feasible constraints
- Finds ways to optimize standard workflows
- Requires little micro-managing (multi-tasks)
- Takes feasible approaches that neither impact the schedule nor impede workflows
- Directs critical thinking or problem-solving toward a concept

© EvalzNow – Assessment Monitoring & Tracking. All Rights Reserved.

Common Theoretical Knowledge Metrics

- Challenges all assumptions
- Notes outliers to a narrative
- Avoids implicit/confirmation bias
- Revises conclusions on new facts
- Emphasizes data above beliefs
- Studies unexplored opportunities
- Considers alternative theories
- Avoids blindly accepting ideas
- Pays attention to small details
- Determines the range of ideas
- Studies past data/records for the reliability/sustainability of new ideas
- Investigates the integrity of sources or models
- Forms a hypothesis (inductive)
- Quickly references known facts and documents
- Knows limitations of theories/concepts
- Knows/follows standard procedures, protocol, policy, and SARPS
- Participates in CPD/CMP training and (re)familiarization training
- Carries out established work instructions promptly
- Possesses the ability to train others
- Directs critical thinking or problem-solving toward an application

Since the scoring criteria from the rubrics are tracked alongside a given task, the user will always be able to assess graphical trends. Moreover, there are no data maturation periods.

EvalzNow has been programmed with twenty (20) main criteria and twenty (20) extra criteria to assist users in assessing/tracking competencies (i.e., knowledge capacities) task-by-task. The main criteria, which are fixed defaults, are provided to support industries without employee performance categories or task-related rubrics. If any main criterion is not applicable, then the user can leave the scoring field blank without impacting any calculated results.

The extra criteria, which can vary from unit to unit, allow the user to define and to score employee performance categories from a company-specific perspective. For instance, the user might want to add CRM response, prototype testing setup, creativity level, quality-to-time ratio, technical order expertise, etc. to the scoring matrix. The user can make these additions and can modify these additions at any time.

The user should always be cognizant of the following:

1. All scores are linked to the scoring criteria, so adding new criteria or modifying existing criteria might cause the user to update scores for all tasks at the candidate level.
2. Whenever the 5-point scoring system is changed to the 3-point scoring system, any scored value above 3 will reset, so the user will have to update scores for all tasks at the candidate level.
3. All scores can be extracted by individual criterion later for sub-tracking.

If an institution is experiencing difficulties creating rubrics or if an institution does not have time to create rubrics, then The Rick Butler English Institute will develop rubrics in line with the institution's requirements. These requirements include job descriptions, satellite tasks, (in)direct responsibilities, and special assignments. Please e-mail all queries to **evalznow@trbei.com**.

It is worth mentioning that EvalzNow calculates growth targets for every candidate based on the scoring criteria, so updating the main criteria or the extra criteria might have a significant impact on the results.

It is worth mentioning that the end dates for all workforce environments should remain open.

Qualitative Measures

Qualitative measures refer to subjective measures such as interpersonal communication, professionalism, and work-related behaviors.

For corporate entities and defense entities searching for SMART rubric guidance about qualitative measures, please consider the items below.

Common Work Ethic Metrics

- Takes initiative to find new work or to solve difficult problems with limited guidance or no direction
- Represents the company well during meetings, presentations, and internal/external reporting chains
- Develops a working relationship with company staff that does not necessarily have to be personal
- Takes ownership of work regardless of accuracy and inaccuracy
- Understands the difference between constructive criticism and personal attacks
- Presents identified problems with practical solutions
- Adheres to company professionalism standards
- Has acceptable attendance rates
- Asks questions to decrease the likelihood of guesswork or rework
- Does not disrupt employee productivity rates
- Does not cause work-related toxicity, lowered morale, or instigate conflict
- Handles diverse workplaces well
- Sets clear goals for advancement + promotion, training + development, and performance
- Uses managerial feedback for improvement
- Makes managers aware of work-related status updates (completed, on hold, in progress, etc.)
- Discusses employee assessments with managerial staff maturely
- Reports any abuses or concerning requests in the workplace to the responsible team
- Helps the company achieve desirable key performance indicators
- Exhibits acceptable behavior even under intense work pressure

When used correctly, EvalzNow will address many concerns, including the cases below.

© EvalzNow – Assessment Monitoring & Tracking. All Rights Reserved.

Reported Quantitative Measures of the Candidate	Reported Qualitative Measures of the Candidate	Project/Program Status Reported by the Department Manager	Potential Conclusions Based on Managerial Inputs and Work Progress
Poor	Poor	Always On-Track or Ahead of Schedule during Internal Meetings	-The manager and the candidate most likely have a poor working relationship. [**personal conflict**] -The manager is comparing the candidate's work performance to that of more skilled/seasoned colleagues. [**comparative error**] -The manager has to reallocate resources to compensate for the candidate's poor performance. [**employee lag**]
Poor	Poor	Always Behind Schedule during Internal Meetings	-The manager most likely has significant findings indicating that the candidate is neither competent nor qualified for the position. [**incompetency**] -The manager has failed to realize that the workload on the candidate might be too high. [**overload/work oversight**] -The candidate is competent, but is inefficient, leading to slips in schedule and missed deadlines. This includes micromanaging. [**low efficiency**] .
Poor	High	Always Behind Schedule during Internal Meetings	-The candidate has excellent working relationships and professionalism despite not being an asset to the company. [**likeability factor**]
High	Poor	Always On-Track or Ahead of Schedule during Internal Meetings	-The candidate exhibits an unacceptable demeanor or subpar professionalism despite being an asset to the company. [**personality/work-ethic flaws**]
High	High	Always On-Track or Ahead of Schedule during Internal Meetings	-The manager's assessment might be clouded by how the candidate causes the manager to appear at the departmental level. [**managerial self-interests**] -The manager has evidence that the candidate is an asset to the company in all aspects, despite small mistakes. [**competent employee**]
High	High	Always Behind Schedule	

© EvalzNow – Assessment Monitoring & Tracking. All Rights Reserved.

		during Internal Meetings	-The manager's assessment might be clouded by the positive working relationship with the candidate. [**friendship factor**] -The candidate might have tasks requiring a high degree of trial-and-error or lacking all details. [**undefined scope**] -The candidate might have tasks requiring iterations or might have colleagues/customers causing rework. [**redefined workflow**]

The number of hypothetical situations is endless; however, the user must use the quantitative measures and the qualitative measures to understand if operational objectives are being met, if employees are assets to the company, and if biases are masking key performance factors. The user should become accustomed to asking candidates questions about a job function instead of assuming that candidates know everything about a job function. Furthermore, the user must sort all job functions according to workflow stages and impacts to schedule.

Although there might be overlaps in classifying workflow stages and scheduling impacts, the user should select the category that best fits the situation. The intent of the classification system is to help users understand the conditions that an employee was under when (s)he was completing an assigned task.

Intelligence groups and defense entities, which normally have rigorous evaluation criteria, ongoing evaluations, and dynamic training mandates, should use the Third Parameter. To be clear, the Third Parameter is designed to handle any framework of any complexity, including the following:

- **Purpose of Intelligence Analysis**
- **Intelligence Models and Cycles**
- **Legal Issues**
- **Data Sources**
- **Logic and Reasoning**
- **Critical and Creative Thinking**
- **Developmental Recommendations**
- **Crime Pattern Analysis**
- **Association Analysis**
- **Flow Analysis**
- **Communication Analysis**
- **Financial Analysis**
- **Strategic Analysis**
- **Indicator Development**
- **Products of Intelligence**
- **Modes of Operation**
- **Effective Interrogation**

Another powerful function is the Butler Utility that evaluates the following:

1. The work effort accumulated from performance point to performance point
2. The effective work period in days vs. the actual tenure period in days
3. The productivity rates of a candidate

The work effort is only applicable to continuous performance point periods. The effort calculation is a function of the total number of performance points, productivity rates, effective work periods, tenured time, and the amount of work captured in a given performance point.

The effective work period scales the actual tenure period by a magnification factor based on the anticipated work completion times set by a Scope of Work (SoW), assigned tasks, a schedule, or an official agreement, and the temporal opportunity to complete work.

For companies, the productivity rates of employees should be between 30% and 60% at least. We recommend using the Candidate's Start Date as a reference for the Butler Utility.

We understand that companies require seamless, user-friendly interfaces with small learning curves, so the EvalzNow application has been oversimplified with guidance text and visual icons. There are no hidden menus or special right-click features. Moreover, the user only has to become familiar with the following views:

1. Control View
2. Setup View
3. Analytics View

*A candidate in EvalzNow refers to any person under assessment. This person can be an employee, a manager, an internal/external trainer, and so forth.
